Welcome to X9Assist !

We thank you for the decision to install our desktop product. Please contact us at support@x9ware.com if you run into any questions or issues getting started.

All of our desktop application products (X9Lite, X9Vision, X9Validator, X9Assist, AchValidator, and AchAssist) are supported from this single software installation. Actual functionality will be assigned based on the license key that is used for activation.

- X9Lite is our freeware tool that allows small X9.37 and ACH files to be opened and browsed, subject to a limit of 100 items. X9Lite shows front-side images only and does not support ICLR return files, and is a great example of some of our core capabilities and user interface.
- X9Vision is our entry level X9.37/ACH file browser that supports unlimited file size. The Item Viewer provides full view of front and back side images. There is support for both ICL/ICLR files, and includes our "find" function to search on by amounts, routing, and account number.
- X9Validator builds on X9Validator and includes functions validate, modify, repair, export, merge, print, and IRD Print. These are the most commonly used x9.37 tools, with capabilities that are unequaled in the industry today.
- X9Assist builds even further by adding our most advanced x9.37 tools. Specifically, X9Assist is targeted at the ability to create x9.37 test files either from scratch or by sanitizing data from your production data. X9Assist is designed to support the most complex x9.37 environments. These added tools include make/generate, create, scrub, clone, repackage, compare, TIFF tester, and the X9Utilities console. All very advanced and very powerful tools.
- AchValidator and AchAssist provide the same advanced capabilities as X9Validator and X9Assist (respectively), as applied to ACH. These are the same tools within the same user interface, but targeted to the NACHA file format.

X9Assist Evaluation is supported by this software installation, and provides access to all X9Assist functionality but with a limited file size.

Product registration is completed from our toolbar using the / Help / Registration / function. Instructions for license key entry have been included in our email transmittals.
